Ch.5: Karnauch Maps

5.1 Minimum Forums of Switching Functions.

· 神紀 是 到 子是: Algebraic Simplification.

1. Combine terms using XY'+ XY = X.

→ X+X=X이트 에어먼 뉴티에 가능.

2. Eliminate redundant terms by using the consensus theorems XY + XZ + YZ = XY + XZ

Implicants of Fi 健 1974 激起 时间 하片 越

- Any single 'I' or any group of 'I's which can be combined together on a map : each grouping of any size is thus an implicant.

Prime Implicants of F: Implicants 3014 173 2 274 grouping

-> A product term if it cannot be combined with other terms to eliminate variable

". a longest possible grouping.

Essential Prime Implicants of F (EPI): Prime Implicants Zorlal 5184 2/2 7/41 2/52 Prime Implicants

A prime implicant that is the CNLY Gover for some 1's on the map

(essential is relative to a particular minterm): always look for E.P.I. first in simplification.

*** Simplification Procedure ***

Step 1) Identify those groupings

Step 1) Identify those groupings that are maximal step 2) Use the fervest possible number of maximal groupings.

·登.

1. First, find essential Prime implicants

2. If minterms are not covered by essential prime implicants only, more implicants must be added to form minimum expression.
